The thermostat can either be AC or battery powered, or both. If the thermostat was wired to be AC powered when installed, **batteries are optional** (to provide backup power for clock).

The thermostat has a memory backup that saves the thermostat's settings in case of a power interruption. The system settings will be retained but the clock will reset after 90 seconds with no battery or AC power.

The reset button located under the battery cover can be used to reset the thermostat to factory defaults.

### WARNING

The reset button should only be used by the installer.

# PROGRAMMING

## UNDERSTANDING PROGRAM SCHEDULES

The daily schedule is split into four sections:

**WAKE:** temperature you would prefer to wake up to.

**LEAVE:** temperature when you are away from the house.

**RETURN:** temperature you would prefer to return home to.

**SLEEP:** temperature you would prefer while sleeping.

The times shown in the table below are the defaults. The start time and temperature of each section can be changed to fit your schedule. (See Changing Program Schedules section on pages 12-13.)

This thermostat is pre-set to use the following program settings (see table below). We recommend these settings, since they can reduce your heating/cooling expenses. The fan program is pre-set to AUTO for all events.

Event designator	Start time	Set temperature		Fan
		Heat	Cool	
WAKE	6:00AM	70°F (21°C)	78°F (26°C)	AUTO
LEAVE	8:00AM	62°F (17°C)	85°F (29°C)	AUTO
RETURN	5:00PM	70°F (21°C)	78°F (26°C)	AUTO
SLEEP	10:00PM	62°F (17°C)	82°F (28°C)	AUTO

# PROGRAMMING

## UNDERSTANDING PROGRAM SCHEDULES (CONTINUED)

Optionally, the thermostat can be set to a two event or commercial schedule. (See Setup Menu on page 17.)

Event designator	Start time	Set temperature		Fan
		Heat	Cool	
WAKE/OCCUPIED	6:00AM	70°F (21°C)	78°F (26°C)	AUTO
LEAVE/UNOCCUPIED	10:00PM	62°F (17°C)	82°F (28°C)	AUTO

## PROGRESSIVE RECOVERY

The Progressive Recovery feature allows the thermostat to activate the heating and cooling equipment prior to an event in order to reach the desired temperature at the start of the next scheduled event.

**Example:** If the WAKE time is 6 am, and the temperature is 70°, the heat will come on before 6 am, so the temperature is 70° by the time you wake at 6 am.
